1. very good 2. good 3. poor 4. very poor

This neuro presentation file, the movement is very small. It is difficult to select system that can send such a subtle movement.

The sound from NTU was not good.

It was very hard to understand what is the issue at the patient video. It looked the connectivity of the Kyushu U's was bad or couldn't keep the enough bandwidth to show the sensitive actions. Maybe, all the stations should make the whole rehearsal based on the scenario and should get how to switch the devices first.
The 37th APAN Meeting - Neurology
