One Dr from Javeriana couldn't access by streaming, the pin number didn't work. The volumen level from Osaka was very low and we couldn't hear.

Microphone problem but I solvencia it in the first 5 minutes

I could hardly hear the Osaka station. After teleconference INCA station said my image was freezed, but I didn't notice that, since I couldn't see my own image.

INCA still has problems with sound and image, although it has improved in relation to the last conference. I agree with statments about low detection and few Esd'cases consequently mainly in public hospital. All centers (TEMDEC) involved should desenvolve ideias to modify this profile, creation reference'centers with some support of Japan. Congratulations.
