

<p>【Event】 The 43rd APAN Meeting - Dental</p>	<p>【Comments】 More than 45,000 people are diagnosed with oral cancer and more than 8,000 die of the disease. Of all the procedures available to control oral cancer, none has affected survival as much as has early detection. Research shows that cancers can be prevented if people applied everything known about cancer prevention to their lives. In this session, we would like to explore the latest research and the methods employed for the prevention of oral cancer, in which dentist plays an important role in this regard. Some dental institutions in Asia were actively involved to discuss it. Five speakers delivered their studies and case reports to give comprehensive knowledge about oral cancer prevention.</p>
<p>【Date】 2017.02.15</p>	
<p>【Venue】 India Habitat Centre (India), University of Indonesia (Indonesia), Airlangga University (Indonesia), Brawijaya University (Indonesia), Universitas Hang Tuah Surabaya (Indonesia), Kagoshima University (Japan), Tohoku University (Japan), National Taiwan University (Taiwan)</p>
