

REUNA
Ciencia y Educación en Red

REUNA, hub of digital connectivity and articulation of the Research, Education and Innovation ecosystem

Sandra Jaque, sjaque@reuna.cl
Technology Manager – REUNA

Chilean Telemedicine Workshop, 29th Nov 2017, Coquimbo

REUNA is for the research and education institutions

36 Institutions in total

19 Universities

5 Astronomical Centers

11 Research centers

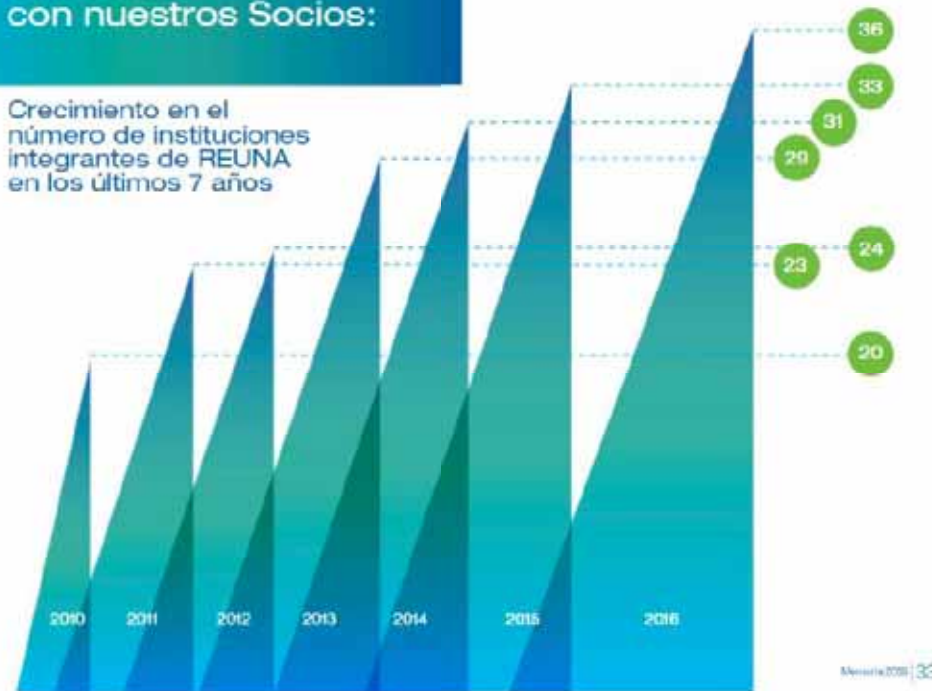

CONICYT

Growth in the last years

Crecemos con nuestros Socios:

Crecimiento en el número de instituciones integrantes de REUNA en los últimos 7 años

50% of all the Institutions with Medicine Faculties are connected already to REUNA

What are the networks for research, education and innovation?

- High network capacity
- Robustness infrastructure
- Dedicated for I+D+E+i
- Local and global connectivity
- **Institutions and people networking to collaborate and move the knowledge frontier**

Our network infrastructure
has presence in **13** out of **15**
regions of the country

3000 Km of network

1 to 10 Gbps over a capacity model

First **100G** just implemented!

**The Institutions are connected to the
nearest PoP at 1G or 10G**

There is “unlimited” traffic at national level

Moving forward to have an optical national network for Science & Education

Based on a model of “building infrastructure” instead of renting capacity

High Capacity Network, 100G backbone

- Model:

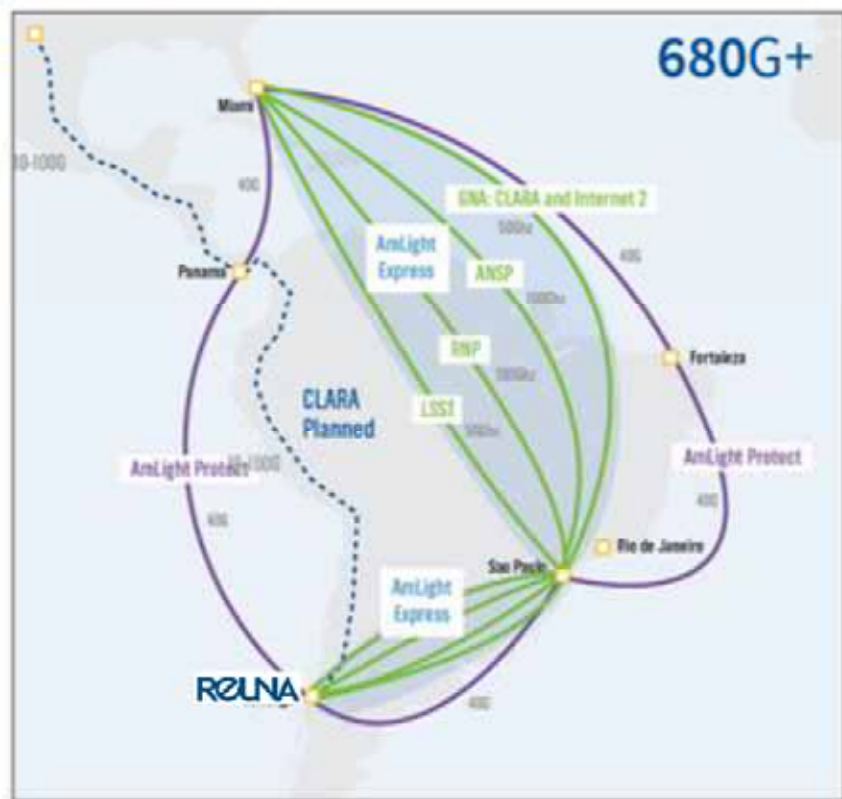

- Right of use of 1 pair of fiber for a long term period
- The fiber is lighted with DWDM technology
- Optical channels of 100/200Gbps

- State:

- La Serena – Santiago: First 100G already on place
- Santiago – Concepción: Deployed during 2018
- La Serena – North: Seeking for solutions
- Concepción to South: Planed to be prospecting

Our community is globally connected

Amlighth, RedCLARA

- Optical spectrum from AL to USA
- 100G leased capacity ring as backup

BELLA

Building Europe Link to Latin America

- Latin American terrestrial network by NRENs
- New submarine cable to connect directly AL-EU
- The research community will have owned spectrum over the cable. 4Tbps at current technology.
- In 2019 it is planned to transport the 1st 100Gbps by the fiber

Services for collaboration

How the research community use this infrastructures

**music and dance
between Chile and
different countries
abroad**

**English/Spanish
workshops between
universities in the USA
and Chile**

**A rock hammer
in Codelco was
operated from
Tokyo**

**Research
laboratories
between Brazil and
Chile uses remote
instrumentation**

**A simulated
telescope
almost 11,000
km in diameter**

**CCTVal (USM) is
part of the ATLAS-
CERN project**

Services for facilitate the collaboration

Studia

Approach with Telemedicine initiatives

- We have been in touch with several initiatives since the last 10 years

A national network for telemedicine

- We are ready to collaborate in improving the connectivity
- The network architecture allows to deploy specific purpose networks
