

Online Pre-Training Seminar for Area-Focused Training Course “Endoscopic diagnostics and therapeutics of early gastric cancer”

Background

The training program “Endoscopic diagnostics and therapeutics of early gastric cancer” was officially requested by the Governments of Central Asia and the Caucasus Countries in 2019 and was finally approved by the Government of Japan to be implemented in Japanese FY 2020 and FY 2021. Japan International Cooperation Agency (JICA) has been under preparation towards the implementation of the program with Kyushu University Hospital, which has abundant experiences of technical transfers to other countries in this area. However, due to the pandemic, JICA had regrettably decided that the training program in Japan to be postponed for one year (FY 2021 and FY 2022).

Last year, a telemedicine program on gastric cancer was held instead. Unfortunately, the pandemic continues and is rampant, JICA has decided to postponed one more year. To keep and strengthen our friendship, Kyushu University Hospital will offer a telemedicine program for FY 2021.

Overview

Title	Pre-JICA Training Seminar for Country/ Area-Focused Training Course “Endoscopic diagnostics and therapeutics of early gastric cancer” for Central Asia and the Caucasus Countries
