

【 Connecting institutions 】

Kyushu University Hospital (Japan),
 KonKuk University Hospital (Korea, Republic of),
 Catholic University of Korea Seoul St. Mary Hospital (Korea, Republic of),
 Osaka Psychiatric Medical Center (Japan)

(More than 60 psychiatrists from Korea and Japan were participated)

【 Comments 】

The KJYPC was established in 2000 for the friendship and academic development of psychiatrists in Japan and Korea and has been held mutually. Considering the COVID-19 pandemic, the first online conference was held this time. Professors' lectures (hoarding, hikikomori, internet addiction, & dementia) and case presentations by younger participants were held, which contributed to the development of early-career psychiatrists in both Japan and Korea.

Networking AD dementia

Alzheimer's disease dementia

Results

- In the AD cohort, we found some patterns between the 29 genes and the 200 NIMs.
- Three types of NIMs were divided into thickness, volume and pct.
- These 3 measurement groups were networking separately under the control of the 29 genes in the AD subjects.
