The 19th Endoscopy Train-the-Trainer program for Bhutan

【 Connecting institutions 】	【 Comments 】
Jigme Dorji Wangchuck National Referral Hospital (Bhutan), NPO Zero Helicobacter-related International Gastric cancer Network (Japan), Fukuoka University Chikushi Hospital (Japan), Juntendo University (Japan), Gelephu Central Regional Referral Hospital (Bhutan), Oita University (Japan), Kyushu University Hospital (Japan), Tsirang Hospital (Bhutan)	Several case presentations were made from JIDWNR Hospital in Bhutan. One of the early gastric cancer cases was incidentally detected during ERCP. It is a significant improvement that physician was able to recognize early gastric cancer even in a procedure not primarily intended for upper gastrointestinal examination. In addition, there was a valuable suggestion from Fukuoka University Chikushi Hospital regarding methods to assess the depth of cancer invasion during endoscopic observation. These insights should be applied to future diagnostic practice.
