The 61st APAN Meeting -Human Genetics

【 Connecting institutions 】	【 Comments 】
Le Meridien Dhaka (Bangladesh), Bangladesh Medical University (Bangladesh), Kyushu University Hospital (Japan), University of Toronto (Canada), US Bangla Medical College Hospital (Bangladesh)	This session focused on human genetics and the development of precision medicine in Bangladesh. Current initiatives, challenges, and prospects in a developing country were presented. The session was streamed via YouTube, which enabled broader participation from online viewers. Several participants actively posted questions and comments. The Q&A session addressed the reliability of AI in clinical practice, ethical issues in genetic testing, the need for stronger data infrastructure, and concerns about national policy and equitable access. Unfortunately, a few questions from the online audience could not be addressed due to time constraints. Overall, the session proceeded smoothly and had a useful discussion.
