Conclusions

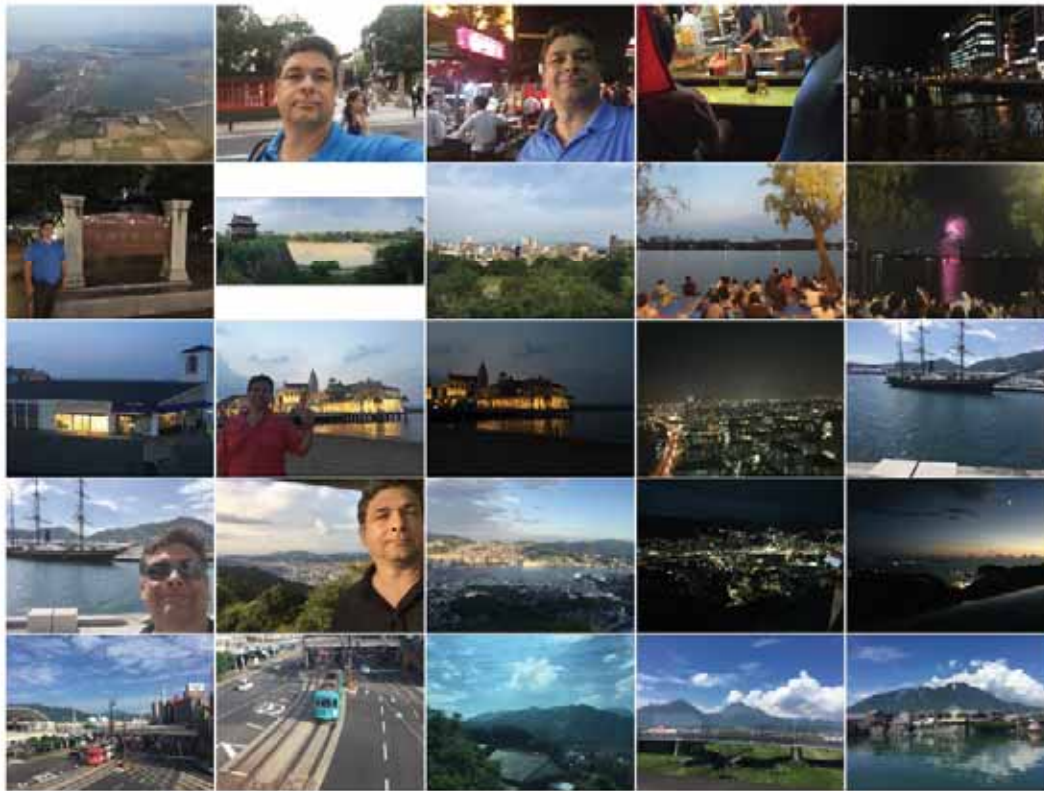

- ▶ To deliver a high quality service is necessary enough preparation and test test test.
- ▶ In Videoconference is expected adjustments always, we can't assume that will works perfect at first, that's is the importance of testing.
- ▶ Collaboration between academic institutions, medical doctors, engineers at country level and international level is an excellent way of development, not only personally but as a society.
- ▶ Western societies we have a lot to learn from Asian cultures and vice verse, and using teleconference technology is the best way to improve that knowledge exchange.
