WHAT I GET

EXPERIENCE

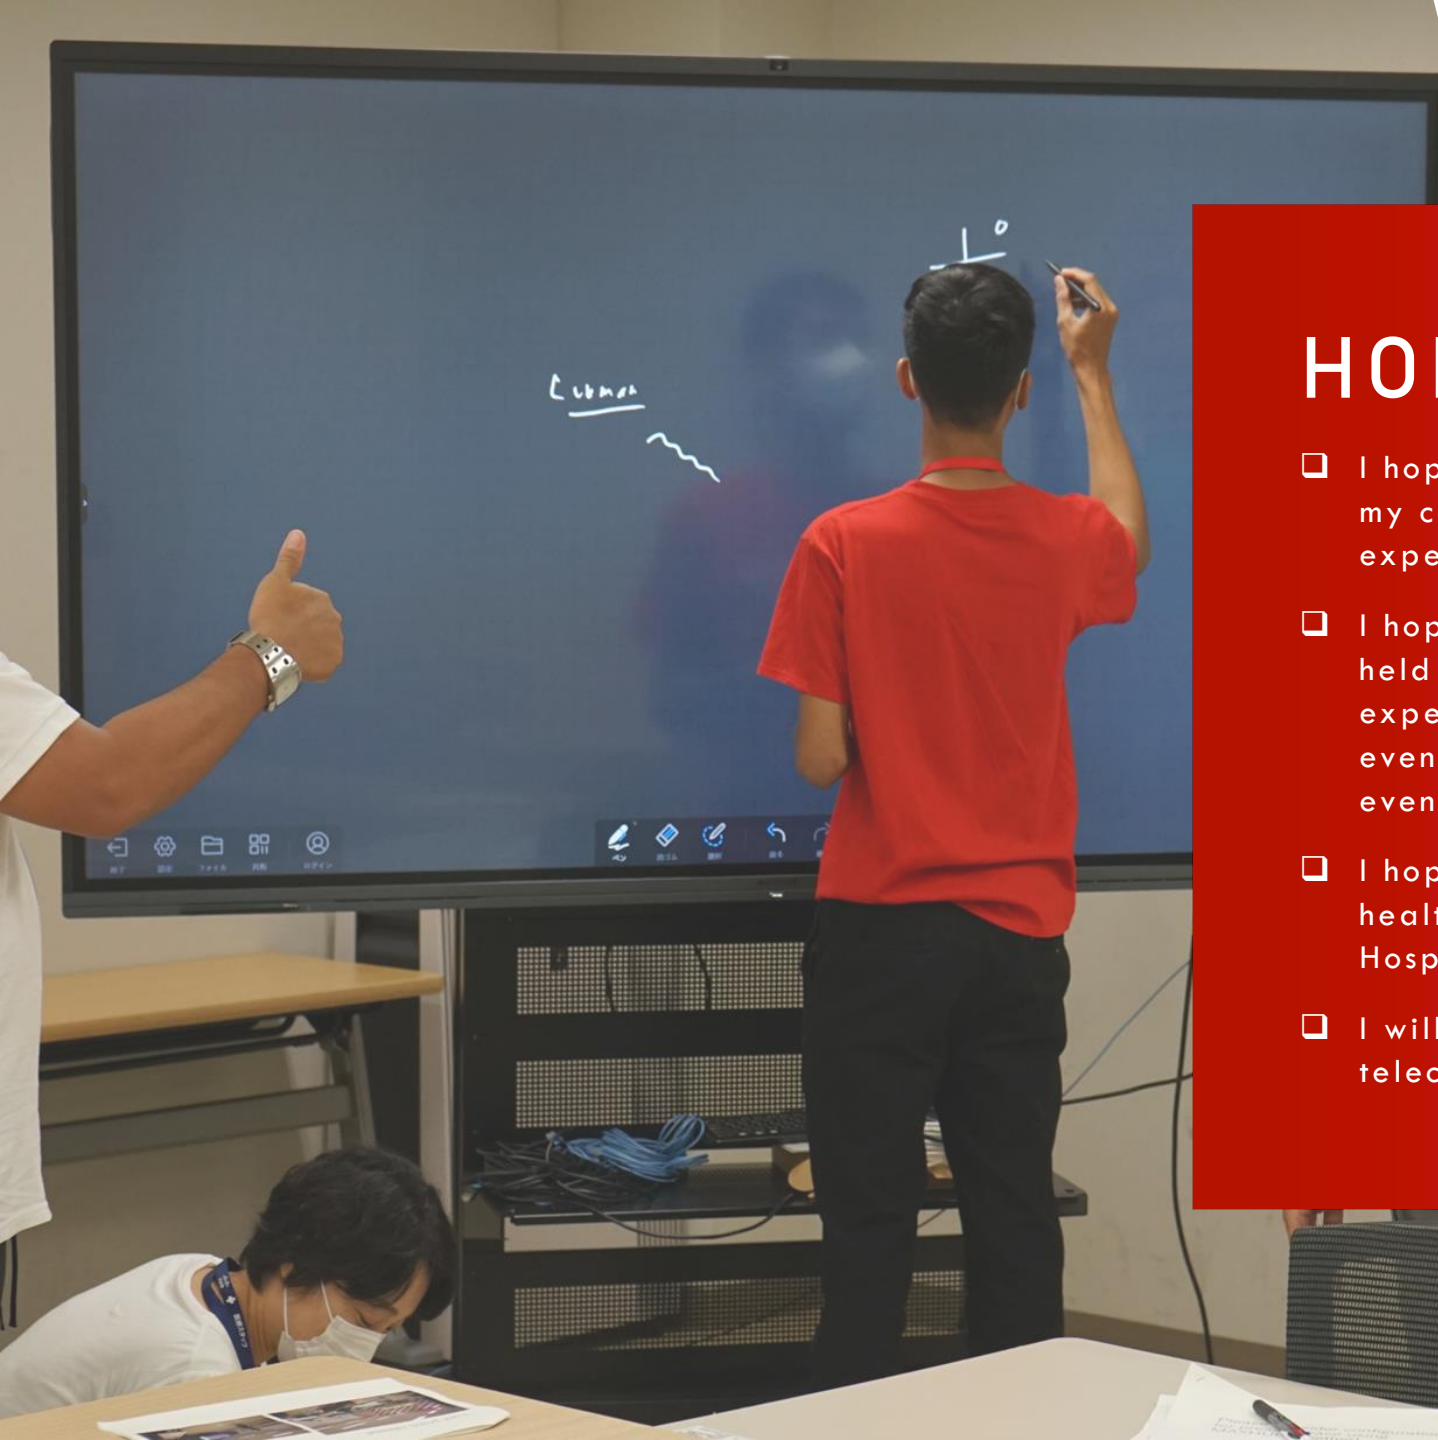

i get a lot of experience at here, I can try any equipment. Everyone give me change to develop. So much different culture from us, surely I enjoy this training.

TECHNOLOGY

Japan of course a hi-tech country, so of course the health facilities here are very advanced. Compared to my country, it is clearly very far away, but I am sure that one day Indonesia will reach it. the key word is the use of information technology.

ANOTHER WORLD (ISEKAI)

I think went we go by plane, we landing to “ISEKAI”. Its another world, its amazing moment.

HOPE FOR FUTURE

- I hope that from this training I can share with my colleagues about the knowledge and experiences while I am here.
- I hope the ID-Telemedicine workshop can be held again, so that we can get new lessons and experiences. maybe also make new friends. even though it's only through online meetings, even though I hope to have offline meetings.
- I hope that hospitals in Indonesia can have health technology like Kyushu University Hospital
- I will propose several tools to support teleconferencing in my hospital.

SUMMARY

Learning by Sharing

We cannot be passive, it is argued that learning should not be a solitary process: "Knowledge is created as it is shared, and the more it is shared, the more is learned" [Leidner and Jarvenpaa, 1995: 268]. So we must learn by experimenting, learning by investigating, and learning through practice. So learn and share.
